Summary

Third-year B.Tech IT student specializing in backend engineering, full stack development, and real-time systems. Delivered production-grade applications with a **14x API speed improvement** via Redis caching. Seeking a backend or full stack internship.

Education

Ajay Kumar Garg Engineering College

B.Tech – Information Technology

2023 – 2027

Ghaziabad, Uttar Pradesh

Experience

Independent Full Stack Developer

- Developed 3+ production-grade full stack applications using Node.js, Express.js, React.js, and Next.js; deployed on Linux-based cloud infrastructure (Vercel, Render).
- Optimized API performance using Redis read-through caching with TTL and pattern-based invalidation — achieving a **14x speed improvement** (3.5s → 0.25s) in production.
- Architected real-time collaborative features via WebSockets and Liveblocks; integrated Trigger.dev background jobs for async AI workloads and CI/CD pipelines for automated deployment.
- Implemented JWT and Clerk-based authentication with RBAC, REST API design with Zod validation, and dual payment gateways (Razorpay + Stripe) with webhook handling.

Projects

Ghost AI — AI Collaborative System Design Tool | [Next.js](#) · [Clerk](#) · [Liveblocks](#) · [Trigger.dev](#) · [Gemini AI](#) · [Prisma](#) · [Vercel](#) | [Live](#) | [GitHub](#)

- Real-time collaborative canvas where multiple users design system architectures simultaneously with live cursors and shared presence via Liveblocks.
- Gemini AI agent interprets natural language prompts and generates distributed node/edge architectures on the canvas through Trigger.dev background jobs.
- Clerk authentication with protected routes and project ownership; canvas autosaved to Vercel Blob with metadata persisted in Prisma across 29 spec-driven features.

Real-Time Sports Match Hub | [Node.js](#) · [PostgreSQL](#) · [Redis](#) · [WebSockets](#) · [React](#) · [Docker](#) | [Live](#) | [GitHub](#)

- Per-match WebSocket subscription model — clients receive live scores and commentary only for subscribed matches.
- Redis caching (TTL + pattern invalidation) cut API response time **14x** (3.5s → 0.25s); Drizzle ORM + Zod validation on all routes.
- Arcjet rate limiting and bot detection on HTTP/WebSocket; Docker Compose with Redis 7 AOF persistence; Site24x7 APM in production.

Zeestyle — Full Stack E-Commerce Platform | [React](#) · [Node.js](#) · [MongoDB](#) · [Razorpay](#) · [Stripe](#) | [Live](#) | [GitHub](#)

- JWT auth with access/refresh tokens, password reset, auto-logout and admin dashboard for product and order management.
- Dual payment gateway (Razorpay + Stripe) with webhook handling; Brevo email API for transactional notifications.
- Documented REST APIs via Postman; shipped via CI/CD pipeline on Vercel (frontend) and Render (backend).

Technical Skills

Languages: JavaScript (ES2022+), TypeScript, C++, SQL

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, WebSockets, REST API Design, System Design

Databases: PostgreSQL, MongoDB, MySQL, Redis

ORM & Validation: Drizzle ORM, Prisma, Mongoose, Zod

Auth & Payments: JWT, Clerk, RBAC, Access/Refresh Tokens, Razorpay, Stripe

AI & Realtime: Gemini AI, Google AI SDK, Liveblocks, Trigger.dev

DevOps & Tools: Docker, Docker Compose, CI/CD, Git, GitHub, Linux, Postman, Vercel, Render, Cloudinary

Security & Monitoring: Arcjet (rate limiting, bot detection), Site24x7 APM

Achievements & Certifications

- Solved **200+** DSA problems on LeetCode; actively studying system design, distributed systems and backend architecture.
- Independently architected and shipped 3+ production-grade web applications end-to-end, including full DevOps and payment integration.
- Certifications:** Fundamentals of Docker & Kubernetes — Scaler Academy • Low Level Design of Payment Apps — Scaler Academy
